The U.S. CDC released more data today in their Vaccine Adverse Event Reporting System (VAERS), a [U.S. Government funded database](#) that tracks injuries and deaths caused by vaccines, and they added more than 2000 deaths following COVID-19 shots over what [they reported last week](#).

Last week they were reporting 6,985 deaths, and this week that number jumped up to 9,048.

This is by far the largest increase of recorded deaths in one week since they started reporting deaths following COVID-19 shots.

From the 7/2/2021 release of VAERS data:

Found 438,441 cases where Vaccine is COVID19

Table

↓	↑ ↓	
Event Outcome	Count	Percent
Death	9,048	2.06%
Permanent Disability	7,463	1.7%
Office Visit	80,268	18.31%
Emergency Room	56	0.01%
Emergency Doctor/Room	56,915	12.98%
Hospitalized	26,754	6.1%
Hospitalized, Prolonged	64	0.01%
Recovered	157,888	36.01%
Birth Defect	239	0.05%
Life Threatening	7,822	1.78%
Not Serious	174,230	39.74%
TOTAL	† 520,747	† 118.77%
† Because some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is the reason why the Total Count is greater than 438441 (the number of cases found), and the Total Percentage is greater than 100.		

Besides the 9,048 deaths, there are 7,463 permanent disabilities, 56,971 Emergency Room visits, 26,818 Hospitalizations, and 7,822 Life Threatening injuries following the COVID-19 injections.

And yet, none of this government data will be reported in any corporate media news broadcast, and those who try to post it on the Big Tech social media sites will be flagged for “fake news” by the “fact checkers.”

These are not even the true numbers, as the CDC selectively chooses what to release to the public each week, and of course many deaths and injuries go unreported because the public is conditioned to believe that none of these deaths and injuries have anything to do with the COVID-19 shots.

To put this into perspective, there are now 30% more deaths recorded in 7 months since the launch of the COVID-19 shots in December of 2020, than during the **entire 31-year history of VAERS** recording deaths following vaccines since it started in 1990.

1990 to November 2020: 6,145 deaths following ALL VACCINES.

([Source.](#))

December 2020 to July 2, 2021: 9,048 deaths from COVID-19 shots only. ([Source.](#))
