

20 MAY 2023 MILANO

At the Baby Fair

SIT-IN OF PROTEST

FROM 9,00 TO 13,00

at SPAZIO ANTOLOGICO, Via Mecenate, 84, 20138 Milano

Last May the "A dream called baby" fair was cancelled: an international showcase with the best offers from the thriving human reproduction market.

Technocrats and eugenicists try again this year with "Wish for a baby" hoping for better times for their biomarket, for their propaganda of artificial dreams and for the advancement of their research which transforms bodies into living laboratories.

In vitro fertilization, reproductive genetics, oocyte vitrification, egg trading, embryonic genetic selections: human beings are ready for the new genetic engineering technologies.

Everything is painted with the best intentions to help realize the desire for parenthood in a large market of desires where everything is for sale, even girls in the practice of surrogacy.

When procreation becomes a technical operation in a laboratory, it becomes the production of the living: selection and extraction of the raw material, analysis in the production phases, discarding of unsuitable goods, checks on the entire process, continuous optimization.

It will be through an enthusiastic submission to the world vision of the technocrat managers of human livestock and in the name of freedom of choice and the claim of a so-called "right to a child" that will determine the end of all freedom, self-determination and of the very meaning of human being.

The surrogacy and medically assisted procreation must be criticized as such and must be criticized in a radical way because each partial criticism has paved the way for the new faces of eugenics and transhumanism.

Transhumanist eugenic technocrats aim to normalize the artificial reproduction of the human as the normal way of coming into the world. Birth becomes the stake for a profound ontological and anthropological transformation of the human being.

We fight for the unavailability of bodies.

Against all artificial reproduction and genetic engineering technologies.
