# A recent peer-reviewed article in Nature\* is the “nail in the coffin” for both the mRNA-covid vaccine and this year’s Nobel Prize in Physiology or Medicine.

Dec 9, 2023 — by Nobelpriset’s protestkommitté in Research, News

On 6 December, 20 scientists published a sensational and conclusive article in Nature\*, one of the world’s most prestigious scientific journals, on the reliability of the mRNA covid vaccine. Pfizer’s vaccine has been analysed, and in 25-30% of the billions of cells that should become spike protein factories in a vaccinated person, incorrect and unnatural proteins are instead produced, i.e. not the spike protein of the COVID-19 virus SARS-COV-2. Every day, the body’s cells produce a total of billions of these defective and artificial proteins. This goes on for at least several months. We have no idea of the short- and long-term effects of billions of defective and foreign proteins, the building blocks of the body, circulating throughout the body. Not a single person knows the consequences.

Now the COVID-19 vaccine must be immediately banned and this year’s Nobel Prize in Physiology or Medicine withdrawn. There must be a thorough and independent investigation into how it could happen that every human being on earth became a test animal in the world’s largest medical experiment, the results of which are absolutely devastating. The investigation should be led by the most informed critics of the COVID-19 vaccine.

Pfizer must feel like it's been one damned thing after another lately. In a year packed with horrible news for the jabs (not to mention poor jab recipients), yesterday saw a critical new discovery of jab problems, possibly the worst and most damning yet.

How bad was it? It was... [Show more](#)
